

Serving Table Instructions

Begin by standing both large legs upright and on a flat surface with the visible screws facing inwards. Locate the bottom brace (54") and insert between the bottom legs as shown. Insert four screws to fasten.

Find top brace (with the notch in the center and is 45") and insert between legs with the notch facing upwards. Insert four screws on each end in the pre-drilled holes. Make sure to align with the top properly as this will support your top and needs an extra 1/8" above wood.

You are ready for the table top to be placed on top now. Align outside edges and screw down with 2 screws per board across the table top into pre-drilled holes over the legs. When finished, go underneath and insert a 3.5" screw under the middle brace into the pre-drilled hole.

Turn over and go to Bench Assembly

Serving Table Bench Instructions

Begin by standing both small legs upright and on a flat surface with the visible screws facing inwards. Locate the bench brace (48") and insert between the bottom legs as shown. Make sure the board rests on the cross member as shown. Insert three screws on each end to fasten.

Turn the bench over and insert middle supports under the pre-drilled holes. Insert four screws on each support and bench leg. Make sure to align the edges properly

Do the same thing all over again for the second bench. I did it by myself in about an hour, your time will vary.

Congratulations ! – You are ready for a meal
