

Tree Bench-HTB4

Step 1:

Layout one half of the tree bench upside down so that the braces holding the boards together are showing. Then set the leg nearer to the outside, but not past the angled tapers at the end of the board. Attach with screws provided. Continue with both sides. You should have 4 legs attached.

Step 2:

Put both halves around the tree and line up the seat boards. Attach support board to bench seat (as shown) from underneath to hide screws, then attach a leg as before. Repeat for the other side and make sure the bench is level. Plastic will bend to ground shape.
